

Masterpiece Arms 9mm Tapco Magazine Fitting Procedure

This applies to Tapco 9mm Polymer Magazines purchased to fit older Masterpiece Arms 9mm Pistols and Carbines.

Occasionally, a Tapco 9mm Polymer Magazine will not snap into place when inserted into the Mag Housing. Obviously, this will not allow the magazine to function properly in the weapon. Please do not attempt to force the magazine to fit.

To correct this issue, simply take a Dremel tool or file and remove material from the mag catch area as shown in this picture. We recommend removing approximately 1/32" of material from this area, then test the "fit." Repeat this procedure until the magazine properly snaps into place.
